December 8, 2024

OUTLINE

- Executive Summary
- Introduction
- Methodology
- Results
 - Visualization – Charts
 - Dashboard
- Discussion
 - Findings & Implications
- Conclusion
- Appendix

EXECUTIVE SUMMARY

Top programming languages in demand:

- JavaScript
- HTML/CSS
- SQL
- Python

Top database skills in demand:

- MySQL
- Microsoft SQL Server
- PostgreSQL

Future technologies to watch:

- Python
- Typescript
- Redis
- Elasticsearch

INTRODUCTION

- Stack Overflow's Annual Developer Survey is the largest of its kind encompassing nearly 90,000 developers.
- Current as well as desired technologies in development are highlighted.
- Developers from all over the world are surveyed.
- This survey would be of great interest to anyone involved in software development.

METHODOLOGY

Data was sourced from:

- [m5_survey_data_demographics.csv](#)
- [m5_survey_data_technologies_normalised.csv](#)
- [Jobs](#)
- [Programming Languages](#)

Data wrangling:

- Blank dimensional values were filtered out

Analysis and visualizations were completed using:

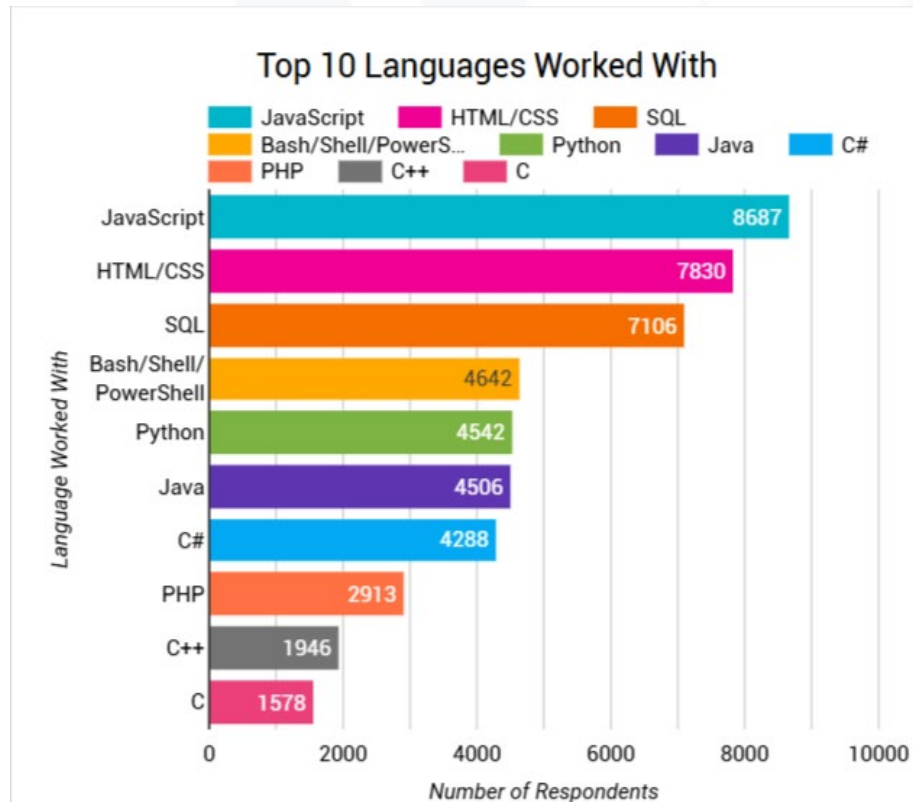

- Python
- Excel
- Google Sheets
- Google Looker Studio

RESULTS

- JavaScript is the world's most used as well as desired programming language.
- MySQL and Microsoft SQL server are the most popular databases, but PostgreSQL is the most desired.
- jQuery is the world's most used web framework, but React.js is the most desired.
- The majority of developers are men, have a bachelor's degree and are under 35 years old.

PROGRAMMING LANGUAGE TRENDS

Current Year

Next Year

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

Findings

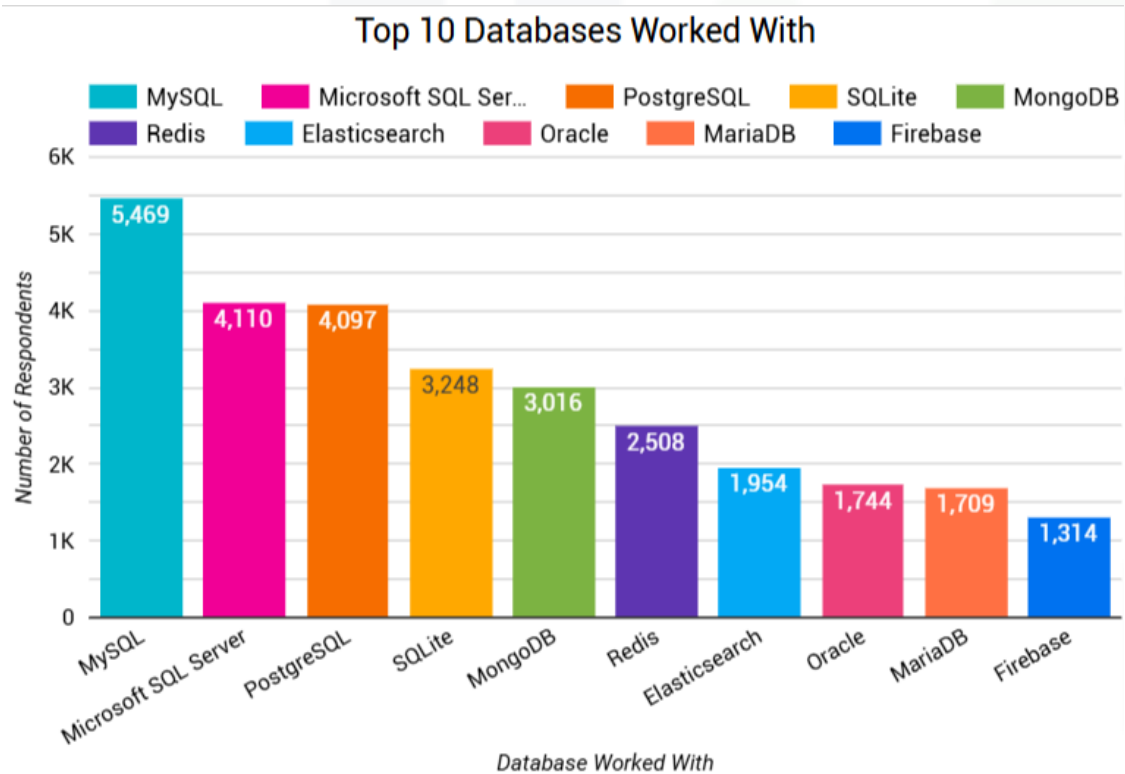

- JavaScript is the top language used by developers as well as the most desired.
- Python overtakes SQL as the third most desired language.
- PHP, C, and C++ are now at the bottom of the top 10 list.

Implications

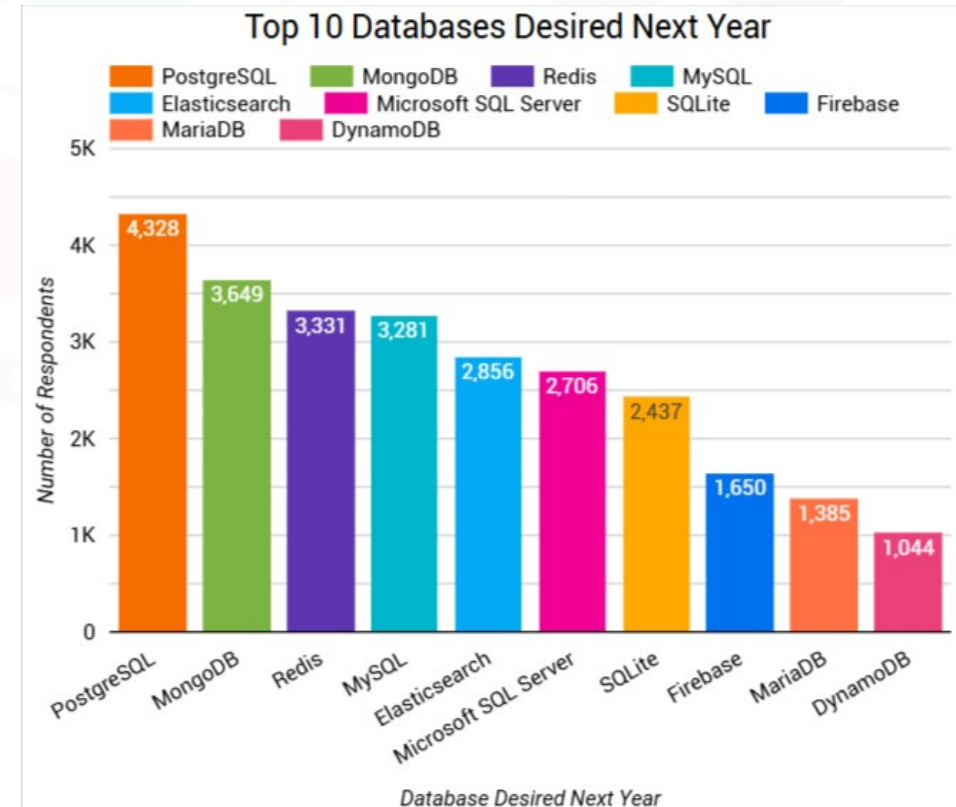

- JavaScript, HTML/CSS, and SQL's popularity indicates a need for full-stack developers.
- Increased interest in Python indicates an increase in the popularity of Data Science and A.I.
- Lower interest in legacy languages such as PHP, C, and C++ could limit employment for older developers.

DATABASE TRENDS

Current Year

Next Year

DATABASE TRENDS - FINDINGS & IMPLICATIONS

Findings

- MySQL is, by far, the most popular database.
- Microsoft SQL Server and PostgreSQL enjoy similar popularity in second and third place.
- PostgreSQL and MongoDB are the most desired databases.

Implications

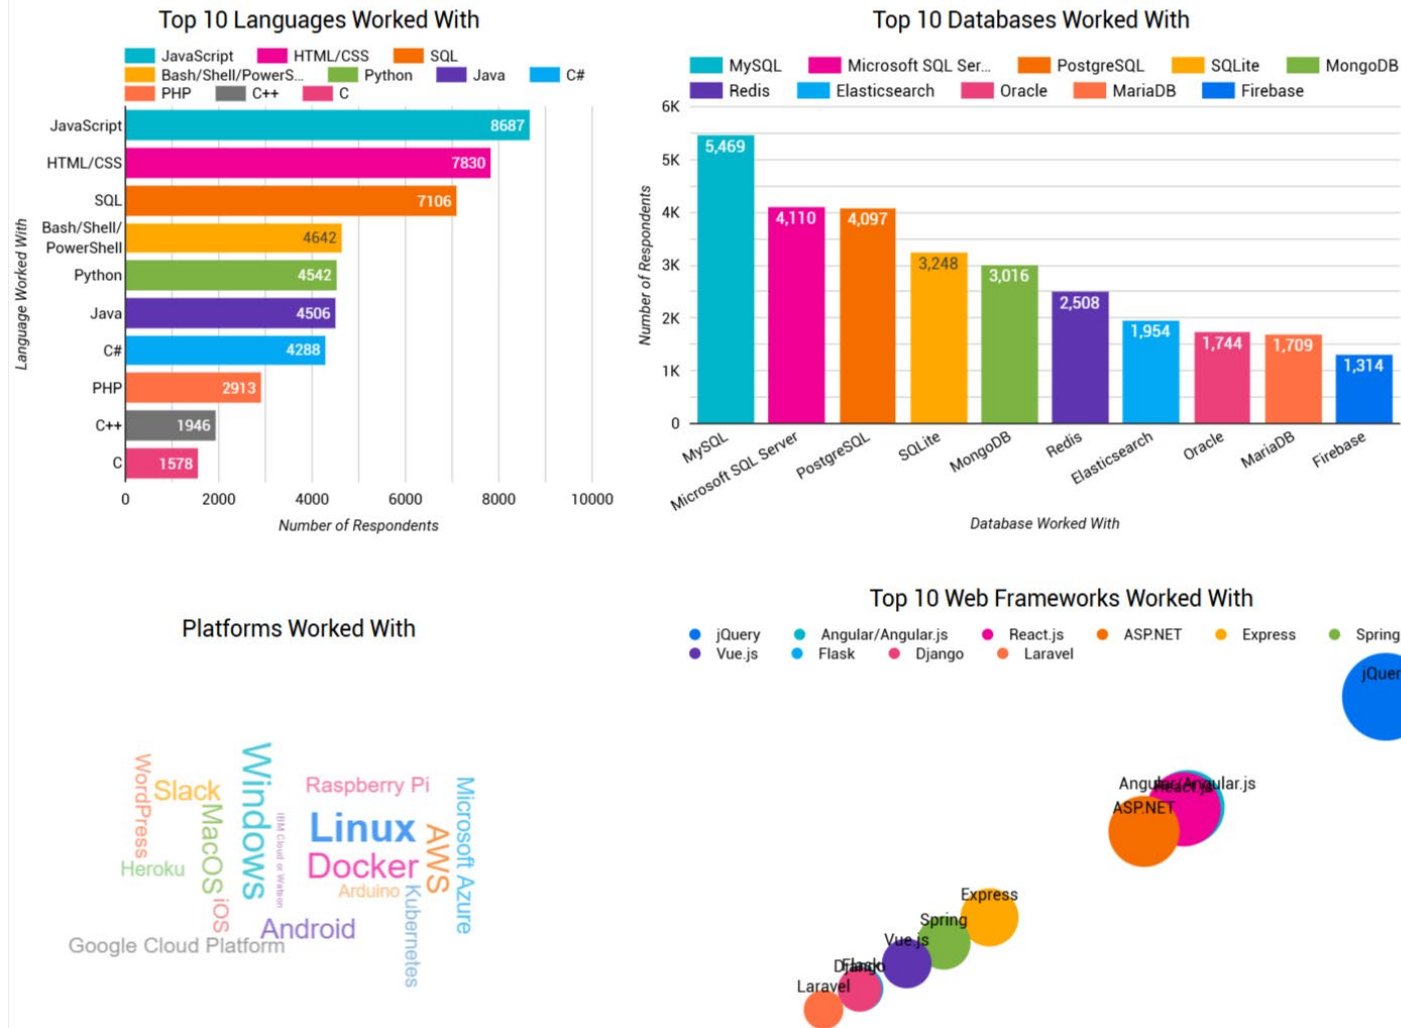

- MySQL's dominance ensures its future popularity.
- PostgreSQL and MongoDB will challenge MySQL's dominance.
- MongoDB's popularity indicates the growing popularity of NoSQL databases.

DASHBOARD

DASHBOARD TAB 1

DASHBOARD TAB 2

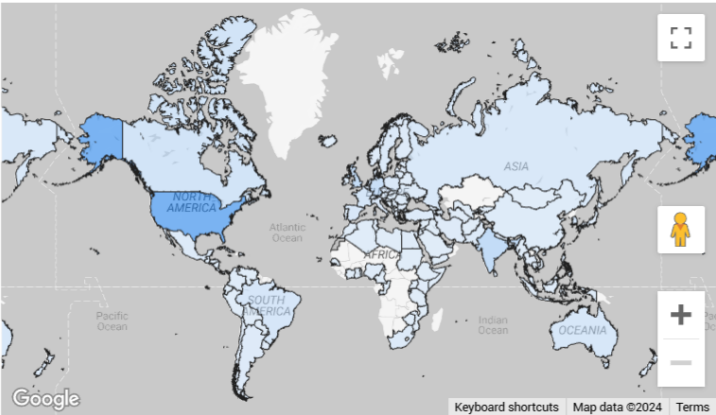

DASHBOARD TAB 3

Respondents Classified by Gender

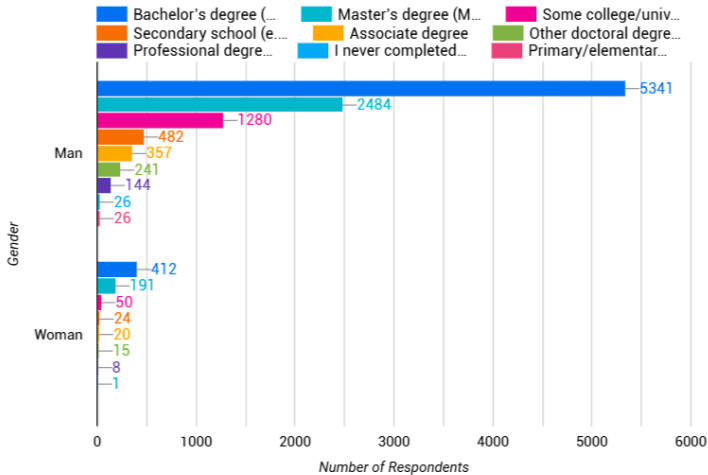

Respondent Count for Countries

Respondent Count by Age

Respondent Count by Gender (Classified by Formal Education Level)

DISCUSSION

- Why are we witnessing a shift to higher-level programming languages?
- Why are web programming languages dominant?
- Will NoSQL databases like MongoDB eventually become more popular than SQL alternatives?

OVERALL FINDINGS & IMPLICATIONS

Findings

- JavaScript is dominant since it is relevant in both frontend and backend development.
- MySQL and Microsoft SQL Server are widely used but not highly desired.
- Women make up 6.5% of developers.

Implications

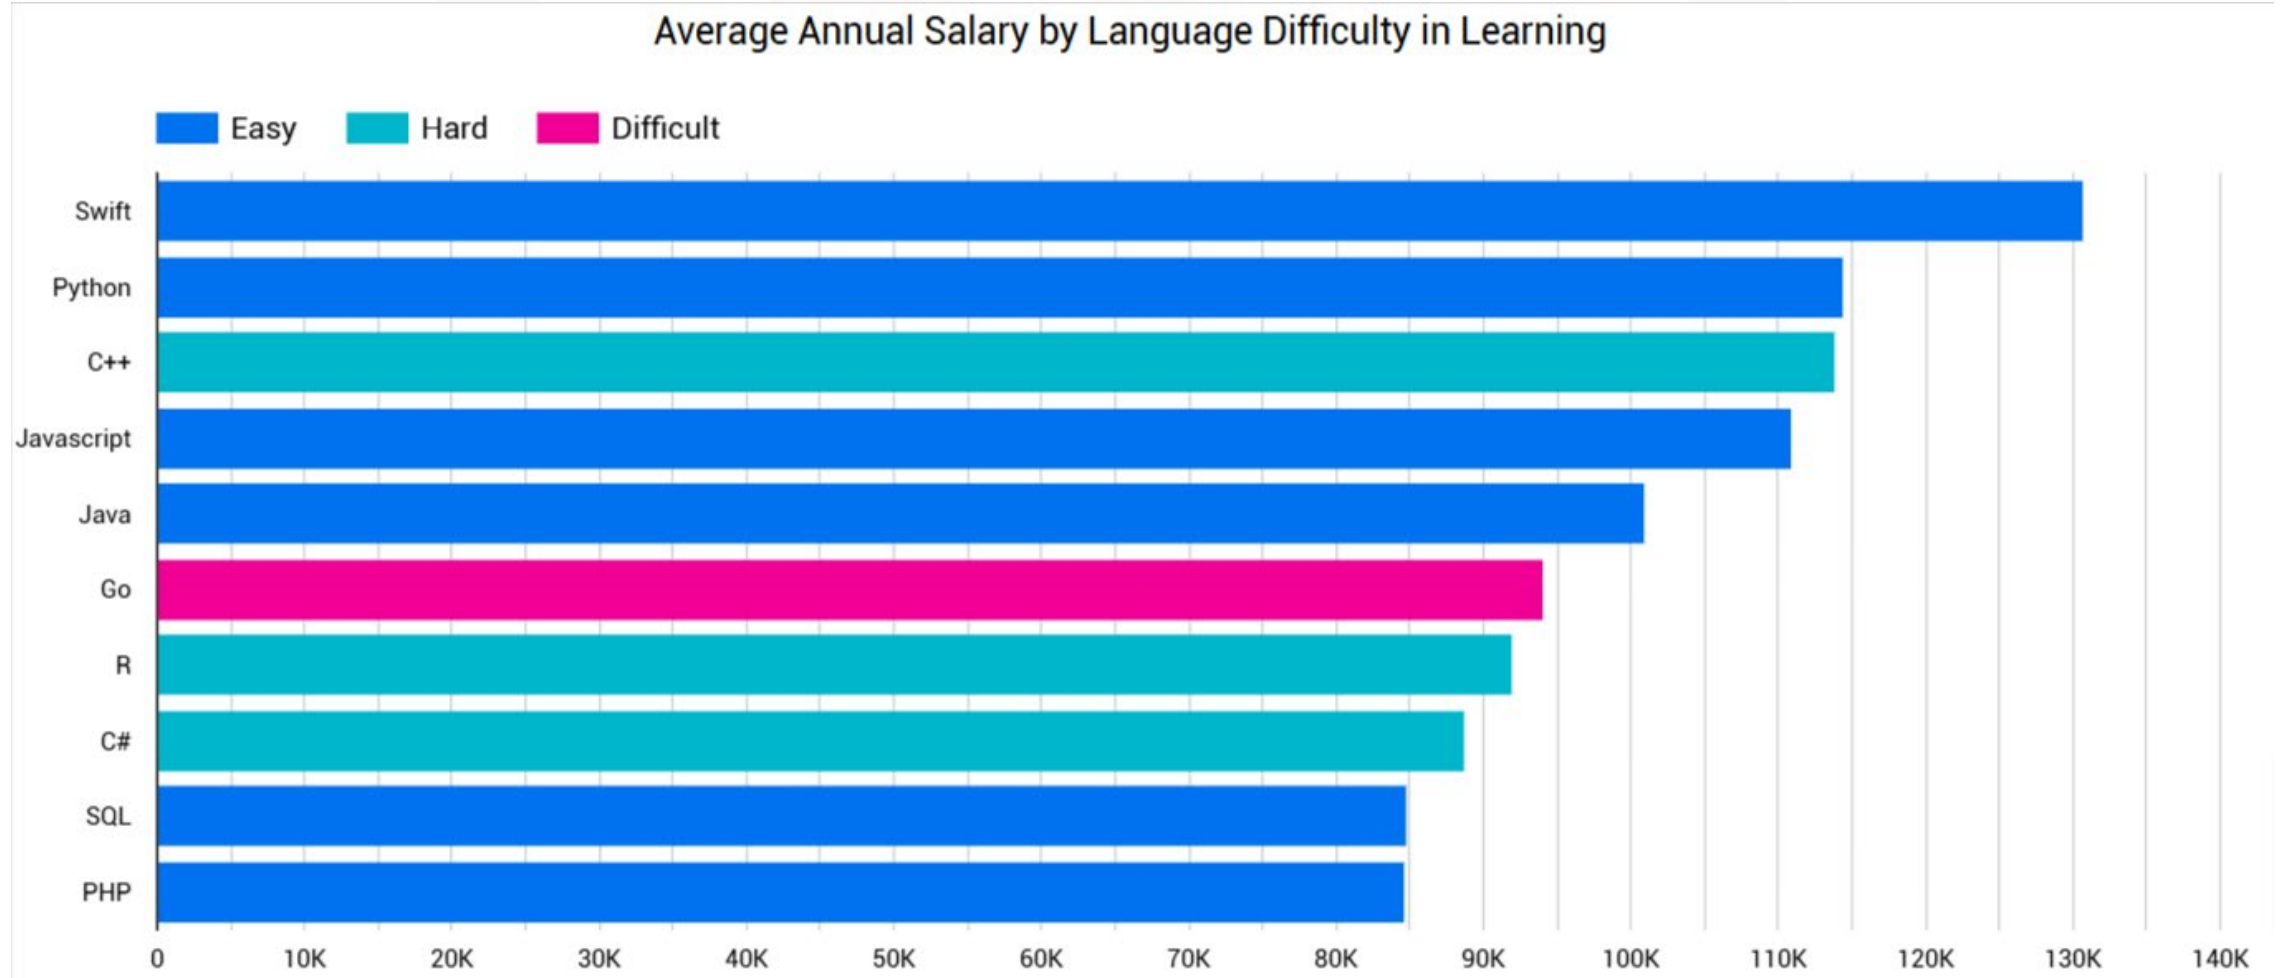

- Developers need to have a deep knowledge of JavaScript.
- PostgreSQL has a great opportunity to steal market share from legacy databases.
- Women should be encouraged to become developers.

CONCLUSION

- Python and JavaScript are need to know languages.
- Having knowledge of the different flavors of SQL would be beneficial.
- Cloud technologies would be worth looking into the maintain your relevance.
